4 Glossary of terms and abbreviations	4-1

About this document

This documentation details the standard in-house data formats, which the BAAN Electronic Message Interchange System (BEMIS) requires as interfaces to the appropriate EDI subsystem.

The documentation is intended for developers of EDI subsystems who want to make an interface with BAAN IV. Furthermore, this documentation helps consultants who want to implement an interface on this basis, to check the correct data contents of the transmission files. Important fields are identified with both the English and German terms, to assist German-language speakers using this documentation. This documentation describes the EDI message *Invoices (incoming/outgoing)*.

Chapter 1 describes the structure of the interface file, the different record types within the file and the used key fields.

Chapter 2 details single record type of the message. This chapter contains an overview table with the corresponding BAAN table fields. In addition, every single field is described in more detail.

1 Introduction

This section details the BAAN electronic message in-house format “Invoices”.

Available record types of the message type invoice

The use of the following record types is conditional (C) or mandatory (M), when you transmit invoice information by means of the message VDA 4906 (Remote transmission of invoices: *Datenfernübertragung von Rechnungen*).

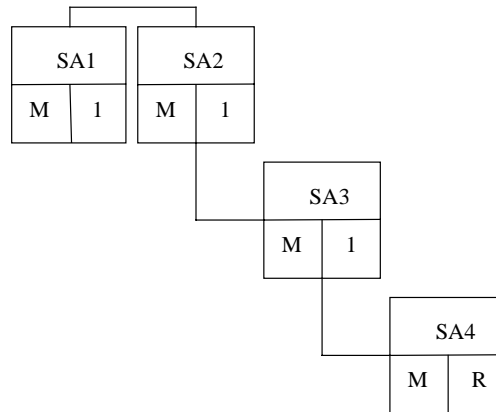

The invoice message (in-house format) consists of the following records:

ID	Status	Name
SA1	M	Invoice Overhead (<i>Nachrichten-Vorsatz</i>)
SA2	M	Invoice Header (<i>Kopfdaten Rechnung</i>)
SA3	C	Shipping Note Header (<i>Kopfdaten Lieferschein</i>)
SA4	M	Invoice Position (<i>Rechnungsposition</i>)

Structure of the invoice message (in-house format)

The branching diagram below shows the structure of the message. It indicates the hierarchical relationship between segments. A segment is a set of functionally-related BAAN tables.

Level	Record ID	Status	Name
1	SA1	M/1	Invoice Overhead (<i>Nachrichten-Vorsatz</i>)
2	SA2	M/1	Invoice Header (<i>Kopfdaten Rechnung</i>)
3	SA3	M/R	Shipping Note Header (<i>Kopfdaten Lieferschein</i>)
4	SA4	M/R	Invoice Position (<i>Rechnungsposition</i>)

Legend:

Status:	Frequency:
M: mandatory message	1: once in message
C: conditional message	R: repeatable in message

Figure 1, Branching diagram

For example, for two invoices of one supplier and one customer, the BEMIS file has the following structure:

```

SA1 ...          BAAN IV Overhead
SA2 ...          Invoice header
SA3 ...          Shipping note header
SA4 ...          Invoice position
SA4 ...          Invoice position
....
SA4 ...

SA1 ...          BAAN IV Overhead
SA2 ...          Invoice header
SA3 ...          Shipping note header
SA4 ...          Invoice position
SA4 ...          Invoice position
....
SA4 ...

```

Invoice – Key fields

The following structure of the key fields is used to determine the related records of an invoice:

Record type	Key field 1	Key field 2	Key field 3	Key field 4
SA1	Message reference			
SA2	Message reference	Identification supplier		
SA3	Message reference	Identification supplier	Invoice number	Shipping note number
SA4	Message reference	Identification supplier	Invoice number	Shipping note number

Network directories

The network directories (folders) form the basis of the communication between the EDI subsystem and BAAN IV. These directories are established in BAAN. The network basis directories for each network is defined in the BAAN session tcedi0120m000. For the network BEMIS, the basis directories can be indicated in the following way:

/auto3/baanIV/bemis/invoice

BAAN will also create the following subdirectories:

/auto3/baanIV/bemis/invoice/appl_from/

/auto3/baanIV/bemis/invoice/appl_to/

/auto3/baanIV/bemis/invoice/command/

/auto3/baanIV/bemis/invoice/store_rcv/

/auto3/baanIV/bemis/invoice/store_sent/

/auto3/baanIV/bemis/invoice/trace/

The above directories have the following function:

- **.../appl_from/:** In this directory, BAAN IV records the outgoing messages which are the defined BEMIS in-house format files. The EDI subsystem can collect them from here.
- **.../appl_to/:** The EDI subsystem writes the incoming message into this directory in the BAAN IV in-house format.
- **.../command/:** Directory of the semaphores.
- **.../store_rcv/:** BAAN IV stores in this directory processed incoming messages, if the configuration is correct. During this process an additional subdirectory by incoming message file is created which is named with a date and time stamp indicating when the message was moved.
- **.../store_sent/:** BAAN IV stores in this directory processed outgoing messages if the configuration is correct. During this process an additional subdirectory by outgoing message file is created which is named with a date and time stamp indicating when the message was moved.
- **.../trace/:** BAAN creates under this directory a log of the incoming and outgoing messages in the processing order, if the configuration is correct.

The file name of the BEMIS in-house format file of the invoice, which is described in this documentation, is defined in the following way:

Direction	File name	Network directory
outgoing	RECHNUNG.OUT	../appl_from
incoming	RECHNUNG.IN	../appl_to

Invoice - Conventions

The following general rules apply to a message record in a BEMIS message file:

- The length of a record can vary
- The message record must consist of all fields, even if not every field contains a value
- The fields in the file are to be separated by a semicolon (;)
- The text values of the fields have to be put in inverted commas (“”)
- The numerical values must not be put in inverted commas (“”)
- Every message record starts with “SAX”.
- Every message record ends with “SAX_END”.

In the following sections you will find the format descriptions for the individual record types of the BEMIS in-house format file. The tables contain the following data:

INVOICE IN-HOUSE FORMAT				
Pos	FIELD NAME	Key	ST	FM

The first block of the table describes the format of a record type:

Pos.	Position of the field in the record
Field name	Name of the field
Key	Key field outgoing (O) / incoming (I)
ST	Field Status mandatory (M) / conditional (C)
FM	Field format
	an..14 alphanumerical field with a maximum of 14 characters
	an14 alphanumerical field with exactly 14 characters
	n..10 numerical field with a maximum of 10 digits
	n1 numerical field with exactly 1 digit
	alphanumerical and date fields have to be put into inverted commas (“...“)

When BAAN generates outgoing messages, the numerical fields are written into the in-house format file without leading zeros. For example, for the year “0000” a “0” is written into the BEMIS message file.

On the outgoing side numerical fields with decimal places is used the following way: If the decimal places equal the value zero these decimal places will not be written. For example, in the interface file the internal value ‘13.00’ is indicated as 13.

Map from Application Table field s (Outgoing)

Table field	Action
-------------	--------

The second block of the table describes the corresponding table field for outgoing messages in BAAN IV as well as the possible special actions, which are taken during the processing of the messages.

Mapping in Application Table field s (Incoming)

Table field	Action
-------------	--------

The third block of the table describes the corresponding table field for incoming messages in BAAN IV as well as the possible special actions, which are taken during the processing of the messages.

2 Invoice – Record description

This chapter describes the record types that are used in the BAAN standard in-house message format for outgoing invoices according to VDA 4906.

SA1 Message Overhead

Status :	Mandatory
Frequency :	Once by transmission
Description:	This record supports the unambiguous identification of the whole message.

Invoice – Record description

INVOICE IN-HOUSE FORMAT					Map from Application Table fields (out)		Map to Application Fields (in)	
Pos	FIELD NAME	Key	ST	FM	Table field	Action	Table field	Action

Definition of BEMIS 1.0a Import and Export File for the Message Type Invoice

Detailed description of Invoice, record type SA1 Overhead

Position	1	Field format	an3	Field Status	M
Field name	Record type		(Key field out/in)		

Description: This field identifies the record type in the message block. It contains the fixed value 'SA1'.

Processing outgoing

EDI subsystem:

BAAN: Field is filled with fixed value 'SA1'.

Processing incoming

EDI subsystem: Field is filled with fixed value 'SA1'.

BAAN: None

Position	2	Field format	an..14	Field Status	M
Field name	Message reference		(Key field out/in)		

Description: This field identifies all related records of one invoice. The numbering of the message reference, which has to be unambiguous by invoice, helps to control the chronological order of the invoices and the complete transmission. The field consists of a fix part with four characters, the current date (format: YYMMDD) and a serial number with four characters.

The special format is defined in the network parameters in the BAAN table tcedi020. When generating the message reference with the EDI subsystem, the created message reference needs to be specific, that is unique. While storing the message reference BAAN checks whether it is specific.

Processing outgoing

EDI subsystem:

BAAN: BAAN generates this number to identify an invoice, stores it in tcedi701.bano and writes it into all records of an invoice.

Processing incoming

EDI subsystem: The EDI subsystem generates this number to identify an invoice and writes it into all records of an invoice.

BAAN: Map to BAAN table field tcedi702.bano

Position	3	Field format	an..17	Field Status	M
Field name	Network address customer				

Description: This field contains on the outgoing side our identification (customer) in the network.

Processing outgoing

EDI subsystem:

BAAN: The identification of the customer in the used network is stored in the table tcedi020 'Networks'. The BAAN table field tcedi028.neta is mapped to this position.

Processing incoming

EDI subsystem: Transmission of the value from the message file.

BAAN: On the incoming side this field will be ignored.

Position	4	Field format	an..17	Field Status	M
Field name	Network address supplier				(Key field)

Description: This field contains the network address of the supplier.

Processing outgoing

EDI subsystem: None

BAAN: The network address is stored in the BAAN table tcedi028 'Relations by network' under the corresponding business partner (supplier) and the corresponding network in the BAAN field tcedi028.neta. The contents of this field is mapped to the position of the transmission file.

Processing incoming

EDI subsystem: None

BAAN: This field will not be used.

Position	5	Field format	an..6	Field Status	M
Field name	Message				

Description: This field contains the code for the identification of the concerned message. The code of the message type shipment notification is 'RECHNU'.

Processing outgoing

EDI subsystem:

BAAN: The internal message code tcedi001.code 'RECHNU' of the BAAN table tcedi001 'Supported EDI Messages' is mapped to this position.

Processing incoming

EDI subsystem: This field is filled with the fixed value 'RECHNU'.

BAAN: The message code in the BAAN table tcedi001 'Supported EDI Messages' determines, which internal message is connected to this BEMIS invoice. In the BAAN table tcedi005 'EDI Messages' is determined for every message, which session (DLL) is used in BAAN to process the BEMIS invoice. The message code is mapped to the BAAN table field tcedi702.mess.

Position	6	Field format	an..6	Field Status	M
Field name	Organization				

Description: This field contains the organization (Standard), which is used for the EDI communication.

Processing outgoing

EDI subsystem:

BAAN: The internal organization code tcedi003.code 'BEMIS' from the BAAN table tcedi003 'Organizations' is mapped to this position.

Processing incoming

EDI subsystem: This field is filled with the fixed value 'BEMIS'.

BAAN: Map to BAAN field tcedi702.orga.
The corresponding organization must have been entered into the BAAN table tcedi003.

Position	7	Field format	an..35	Field Status	M
Field name	Order type				

Description: This field contains a code for the concerned order type.

Processing outgoing

EDI subsystem:

BAAN: In BAAN table tcedi011 there must be an entry for this order type in connection with the message and organization. The BAAN table field tcedi011.koor is mapped to this position. It contains blanks.

Processing incoming

EDI subsystem: The value blank is entered into this field.

BAAN: Map to BAAN table field tcedi702.koor.
In BAAN table tcedi200 there must be an entry for this order type in connection with the message and organization.

Position	8	Field format	an..35	Field Status	M
Field name	Order reference				

Description: This field contains a code for the order reference.

Processing outgoing

EDI subsystem:

BAAN: This position is filled with '0'.

Processing incoming

EDI subsystem: Transmission of the value from the transmission file.

BAAN: Map to BAAN table field tcedi702.msno.

Position	9	Field format	n..6	Field Status	M
Field name	Transmission date				

Description: This field contains on the outgoing side the current date, on which the invoice was created. On the incoming side, this field contains the arrival date of the invoice at the EDI subsystem (format: YYMMDD).

Processing outgoing

EDI subsystem:

BAAN: Map the current date to the position.

Processing incoming

EDI subsystem: Entry of the arrival date of the message at the EDI subsystem.

BAAN: Map to BAAN table field tcedi702.send.

Position	10	Field format	n..4	Field Status	M
Field name	Transmission time				

Description: This field contains on the outgoing side the time, when the invoice was created. On the incoming side, the field contains the arrival time of the invoice at the EDI subsystem (format: HHMM).

Processing outgoing

EDI subsystem:

BAAN: Map the current time to the position.

Processing incoming

EDI subsystem: Entry of the arrival time of the message at the EDI subsystem.

BAAN: Map to BAAN table field tcedi702.send.

Position	11	Field format	an..14	Field Status	M
Field name	Transmission number old				

Description: This field contains the reference number of the previous transmission.

Processing outgoing

EDI subsystem:

BAAN: The position will not be filled.

Processing incoming

EDI subsystem: Transmission of the value from the transmission file.

BAAN: Map to BAAN table field tcedi702.pmo.

Position	12	Field format	an7	Field Status	M
Field name	End of record marker				

Description: This field indicates the end of the record. It contains the fixed value 'SA1_END'.

Processing outgoing

EDI subsystem:

BAAN: The field is filled with the fixed value 'SA1_END'.

Processing incoming

EDI subsystem: The field is filled with the fixed value 'SA1_END'.

BAAN: None

SA2 Invoice header – *Kopfdaten Rechnung*

Status : Mandatory
 Frequency: Once by invoice
 Description: This record type is used to transmit invoice-specific data. The record contains information about the invoice number, order, customer and supplier. This record type is available only once by invoice number. All records, which follow up to the next record of the type SA2, refer to the same invoice number.

INVOICE IN-HOUSE FORMAT				Map from Application Table fields (out)		Map to Application Fields (in)

Detailed description of Invoice, record type SA2 Invoice Header

Position	1	Field format	an3	Field Status	M
Field name		Record type		(Key field out/in)	

Description: This field identifies the record type in the message block.
It contains the fixed value 'SA2'.

Processing outgoing

EDI subsystem: None

BAAN: Position is filled with fixed value 'SA2'.

Processing incoming

EDI subsystem: Position is filled with fixed value 'SA2'.

BAAN: None

Position	2	Field format	an..14	Field Status	M
Field name	Message reference		(Key field out/in)		

Description: This field identifies all related records of one invoice. The numbering of the message reference, which has to be unambiguous by invoice, helps to control the chronological order of the invoices and the complete transmission. The field consists of a fix part with four characters, the current date (format: YYMMDD) and a serial number with four characters.

The special format is defined in the network parameters in the BAAN table tcedi020. When generating the message reference with the EDI subsystem, the created message reference needs to be specific, that is unique. While storing the message reference BAAN controls whether it is specific.

Processing outgoing

EDI subsystem:

BAAN: BAAN generates this number to identify an invoice, stores it in tcedi701.bano and writes it into all records of an invoice.

Processing incoming

EDI subsystem: The EDI subsystem generates this number to identify an invoice and writes it into all records of an invoice.

BAAN: Map to BAAN table field tcedi702.bano

Position	3	Field format	an..15	Field Status	M
Field name	Supplier number				

Description: This field contains the identification which the customer applied to the supplier.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tccom010.osno to position.

Processing incoming

EDI subsystem: None

BAAN: The EDI subsystem will convert the incoming supplier number to own supplier number. Map field value to BAAN table field tfacp200.suno.

Position	4	Field format	an..20	Field Status	M
Field name	Invoice number				

Description: This field contains the identification number, which the supplier applied to a created invoice.

Processing outgoing

EDI subsystem: None

BAAN: The outgoing invoice number consists of the fields tds480.tty and tds480.inv. Sending a VDA-conform message, the series in the BAAN module Finance has to be set in a way that the numerical part of the transaction type consists of not more than 5 digits (tfgld0111m000).

Processing incoming

EDI subsystem: None

BAAN: Map field value to BAAN table field tfacp200.isup.

Invoice – Record description

Position	5	Field format	n..6	Field Status	M
Field name	Invoice date				

Description: This field contains the date of the current invoice.
The field contains the date of the delivery (format: *YYMMDD*).

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tds480.date to position.

Processing incoming

EDI subsystem: None

BAAN: Map field value to BAAN table field tfacp200.docd.

Position	6	Field format	n..13	Field Status	M
Field name	Total VAT amount				

Description: This field contains the total VAT amount of the invoice.
The field contains the numerical VAT amount of the invoice (format: *NNNNNNNNNN.NN*).

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tds480.tvat to position.

Processing incoming

EDI subsystem: None

BAAN: Map field value to BAAN table field tfacp200.vamt

Position	7	Format	n..13	Field Status	M
Field name	Invoice amount				

Description: This field contains the total invoice amount.
The field contains the numerical amount of the invoice (format: *NNNNNNNNNN.NN*).

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field *tdsls480.invo* to position.

Processing incoming

EDI subsystem: None

BAAN: Map field value to BAAN table field *tfacp200.amnt*.

Position	8	Field format	an..3	Field Status	M
Field name	Invoice currency				

Description: This field indicates the currency of the invoice.
It contains the unambiguous alphanumeric identification of the invoice. The currency code is defined according to ISO 4217, for example, *280* for German mark (DM).

Processing outgoing

EDI-Subsystem:

BAAN: Used code and conversion table: 'Maintain Conversion of Currency Codes (out)' (*tcedi4138m000*). Map BAAN table field *tdsls480.ccur* to position.

Processing incoming

EDI subsystem: None

BAAN: Map field value to BAAN table field *tfacp200.ccur*. Used code and conversion table: 'Maintain Conversion of Currency Codes (in)' (*tcedi3124m000*) for conversion of the field in BAAN-specific currency.

Invoice – Record description

Position	9	Field format	n..6	Field Status	M
Field name	Due date				

Description: This field indicates the due date of the invoice.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tds480.dued to position.

Processing incoming

EDI subsystem: Map field value to BAAN table field tfacp200.dued

BAAN: None

Position	10	Field format	n..13	Field Status	M
Field name	Payment				

Description: This field contains the net amount of the invoice (gross amount without service and packaging charges and without VAT)

It contains the numerical amount of the payment (format: *NNNNNNNNNN.NN*).

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tds480.ctnt to position.
(calculation: tds480.invo – tds480.cost)

Processing incoming

EDI subsystem: None

BAAN: None

Position	11	Field format	n..3	Field Status	M
Field name	Percentage VAT				

Description: This field contains the amount of the VAT tax rate.
It contains the numerical amount of the VAT tax rate (format: *NN.N*).

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tds481.pvat to position.

Processing incoming

EDI subsystem: None

BAAN: Map field value to BAAN table field tfgld102.cvat

Position	12	Field format	an..3	Field Status	M
Field name	Plant				

Description: This field contains the plant code.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tdssc001.plnt to position.

Processing incoming

EDI subsystem: None

BAAN: None

Position	13	Field format	an..20	Field Status	C
Field name	VAT number customer				

Description: This field contains the VAT number of the customer's company.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tccom013.fovn to position.

Processing incoming

EDI subsystem: None

BAAN: None

Position	14	Field format	an..20	Field Status	C
Field name	VAT number supplier				

Description: This field contains the VAT number of the own company.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tccom000.vat to position.

Processing incoming

EDI subsystem: None

BAAN: None

Position	15	Field format	an..15	Field Status	M
Field name	Customer number				

Description: This field contains the identification of the customer.

Processing outgoing

EDI-Subsystem: None

BAAN: None

Processing incoming

EDI subsystem: None

BAAN: None

Position	16	Field format	an3	Field Status	M
Field name	Qualifier VAT code				

Description: This field contains the qualifier VAT code which is used to determine the delivery address on the basis of the value in position 11. It must contain the fixed value 'VAT'.

Processing outgoing

EDI subsystem:

BAAN: The field is filled with the fixed value 'VAT'.

Processing incoming

EDI subsystem: The field is filled with the fixed value 'DP'.

BAAN: This qualifier must have been entered in the BAAN table tcedi240 (Tax Code IDs). It is taken into account when determining the BAAN internal VAT code on the basis of the value in position 11.

Invoice – Record description

Position	17	Field format	an7	Field Status	M
Field name	End of record marker				

Description: This field indicates the end of the record.
'SA2_END'

Processing outgoing

EDI subsystem: None

BAAN: The value 'SA2_END' is mapped to position.

Processing incoming

EDI subsystem: The value 'SA2_END' is mapped to position.

BAAN: None

SA3 Shipping Note Header - *Kopfdaten* *Lieferschein*

Status : Mandatory

Frequency :

Description: This record type supports the transmission of single invoice positions to a customer. These instructions refer to the item which is indicated in the previous record type SA2.

INVOICE IN-HOUSE FORMAT				Map from Application Table fields (out)		Map to Application Fields (in)		
Pos	FIELD NAME	Key	ST	FM	Table field	Action	Table field	Action

Detailed description of Invoice, record type SA3 Shipping Note Header

Position	1	Field format	an3	Field status	M
Field name	Record type		(Key field out/in)		

Description: This field identifies the record type in the message block.
It contains the fixed value 'SA3'.

Processing outgoing

EDI subsystem: None

BAAN: Position is filled with fixed value 'SA3'.

Processing incoming

EDI subsystem: Position is filled with fixed value 'SA3'.

BAAN: None

Position	2	Field format	an..14	Field status	M
Field name	Message reference		(Key field out/in)		

Description: This field identifies all related records of one invoice. The numbering of the message reference, which has to be unambiguous by invoice, helps to control the chronological order of the invoices and the complete transmission. The field consists of a fix part with four characters, the current date (format: YYMMDD) and a serial number with four characters.

The special format is defined in the network parameters in the BAAN table tcedi020. When generating the message reference with the EDI subsystem, the created message reference needs to be specific, that means unique. While storing the message reference BAAN controls whether it is specific.

Processing outgoing

EDI subsystem:

BAAN: BAAN generates this number to identify an invoice, stores it in tcedi701.bano and writes it into all records of an invoice.

Processing incoming

EDI subsystem: The EDI subsystem generates this number to identify an invoice and writes it into all records of an invoice.

BAAN: Map to BAAN table field tcedi702.bano

Position	3	Field format	an..15	Field status	M
Field name	Supplier number				

Description: This field contains the identification which the customer applied to the supplier.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tccom010.osno to position.

Processing incoming

EDI subsystem: None

BAAN: The EDI subsystem will convert the incoming supplier number to own supplier number. Map field value to BAAN table field tfacp200.suno.

Invoice – Record description

Position	4	Field format	an..20	Field status	M
Field name	Invoice number				

Description: This field contains the identification number, which the supplier applied to a created invoice.

Processing outgoing

None

EDI subsystem: The outgoing invoice number consists of the fields tds480.tty and tds480.inv. Sending a VDA-conform message, the series in the BAAN module Finance has to be set in a way that the numerical part of the transaction type consists of not more than 5 digits (tfgld0111m000).

BAAN:

Processing incoming

None

EDI subsystem: Map field value to BAAN table field tfacp200.isup.

BAAN:

Position	5	Field format	an..8	Field status	M
Field name	Shipping note number				

Description: This field contains the identification number of the shipping note.

Processing outgoing

None

BAAN: The BAAN table field tdssc018.ides is written into tdssc018.dord and then displayed as alphanumerical field. Map BAAN table field tdssc018.dord to position.

Processing incoming

EDI subsystem: None

BAAN: Map field value to BAAN table field tfacp200.disp

Position	6	Field format	n..6	Field status	M
Field name	Transmission date				

Description: This field indicates the date of the shipping.
It contains a numerical date with a maximum of 6 characters (format: *YYMMDD*).

Processing outgoing

EDI subsystem: None

BAAN: Map BAAN table field tdsIs045.ddat to position.

Processing incoming

EDI subsystem: None

BAAN: None

Position	7	Field format	an..5	Field status	M
Field name	Final delivery point				

Description: This field indicates the final delivery point of the customer.
It contains the alphanumeric code of the final delivery point.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tdssc001.delp to position.

Processing incoming

EDI subsystem: None

BAAN: None

Position	8	Field format	an..4	Field status	M
Field name	Identification of the customer				

Description: This field describes the so-called follow up code or the identification of the customer.

It contains an alphanumeric code.

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tdssc002.fucp to position.

Processing incoming

EDI subsystem: None

BAAN: None

Position	9	Field format	an..2	Field status	C
Field name	Shipping type				

Description: This field contains an alphanumeric code which might be:

- 01 = truck subcontractor (*LKW Unterlieferant*)
- 02 = truck customer (*LKW Kunde*)
- 03 = truck carrier (*LKW Spedition*)
- 04 = truck rail (*LKW Bahn*)
- 05 = truck self (supplier) (*LKW eigen (Lieferant)*)
- 06 = rail freight (*Bahn Fracht*)
- 07 = rail express (*Bahn Expresß*)
- 08 = rail waggon (*Bahn Waggon*)
- 09 = mail (*Postsendung*)
- 10 = air freight (*Luftfracht*)
- 11 = sea freight (*Seefracht*)

Processing outgoing

EDI-Subsystem: None

BAAN: Map BAAN table field tdssc017.trmd to position.

Processing incoming

EDI subsystem: None

BAAN: None

Position	10	Field format	n..13	Field status	C
Field name	Shipping costs				

Description: This field indicates the shipping costs of the concerned delivery.

It contains the numerical amount of the payment (format: *NNNNNNNNNN.NN*).

Processing outgoing

EDI-Subsystem: None

BAAN: None, here (...;...).

Processing incoming

EDI subsystem: None

BAAN: None

Position	11	Field format	n..13	Field status	C
Field name	Packaging costs				

Description: This field indicates the packaging costs of the concerned delivery.

It contains the numerical amount of the payment (format: *NNNNNNNNNN.NN*).

Processing outgoing

EDI-Subsystem: None

BAAN: None, here (...;...).

Processing incoming

EDI subsystem: None

BAAN: None

Invoice – Record description

Position	12	Field format	an7	Field status	M
Field name	End of record marker				

Description: This field indicates the end of the record.
'SA3_END'

Processing outgoing

EDI subsystem: None

BAAN: The field is filled with the fixed value 'SA3_END'.

Processing incoming

EDI subsystem: The field is filled with the fixed value 'SA3_END'.

BAAN: None

SA4 Invoice Position – *Rechnungsposition*

Status : Mandatory

Frequency: Several times by invoice position

Description: This record type supports the transmission of position-specific invoice data. It is directly connected to the previous record type SA2 and can occur several times, but will occur at least once.
