Definition of BEMIS 1.0a Import and Export File for the Message Type Remittance Advice
ii

About this document

This documentation details the standard inhouse data formats, which the BAAN Electronic Message Interchange System BEMIS requires as interfaces to the appropriate EDI subsystem.

The documentation is intended for developers of EDI subsystems, which want to realize an interface of their software to BAAN IV. Furthermore, it supports consultants, who want to implement and verify such an interface within a customer project. Important fields are identified with both the English and German terms, to assist German-language speakers using this documentation.

This documentation describes the EDI message *remittance advice* (*incoming/outgoing*).

Chapter 1 describes the structure of the interface file, the available record types of the file and the used key fields.

Chapter 2 describes every single record type of the message. All data fields are listed in an overview table in connection with the corresponding table fields. In addition, every single field is more detailed.

1 Documentation of the record types

The following section details the BAAN EDI message in-house format “Remittance advice”.

Available record types of the message type remittance advice

The use of the following record types is conditional (C) respectively mandatory (M), when you transmit information about remittance advice by means of the message VDA 4907 (“*Datenfernübertragung von Zahlungsavis*”)¹.

According to VDA the data structure will be as follows:

ID	Status	Name
SA1	M	Remittance Advice Overhead (<i>Nachrichten-Vorsatz</i>)
SA2	M	Remittance Advice Header (<i>Kopfdaten Zahlungsavis</i>)
SA3	K	Remittance Advice Line (<i>Positionsdaten Zahlungsavis</i>)

Structure of the message remittance advice (in-house format)

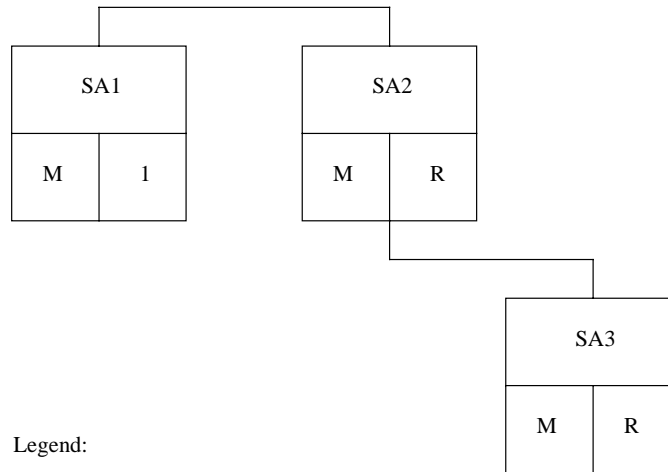

The following record structure is used for the message type BEMIS remittance advice:

Level	Record ID	Status	Name
1	SA1	M/1	Remittance Advice Overhead (<i>Nachrichten-Vorsatz</i>)
2	SA2	M/1	Remittance Advice Header (<i>Kopfdaten Zahlungsavis</i>)
3	SA3	M/N	Remittance Advice Line (<i>Positionsdaten Zahlungsavis</i>)

¹ Remote transmission of remittance advice.

Branching diagram

The branching diagram shows the structure of the message. It indicates the hierarchical relationship between segments. A segment is a set of functionally-related BAAN tables.

Legend:

Status:	Frequency:
M: mandatory message	1: once in message
C: conditional message	R: repeatable in message

Figure 1, Branching diagram

For example, for two remittance advices of a debtor or creditor the BEMIS file has the following structure:

SA1 ...	BAAN IV Overhead
SA2 ...	Remittance Advice Header
SA3 ...	Remittance Advice Line
SA4 ...	Remittance Advice Line
....	
....	
SA4 ...	

SA1 ...	BAAN IV Overhead
SA2 ...	Remittance Advice Header
SA3 ...	Remittance Advice Line
SA4 ...	Remittance Advice Line
....	
....	
SA4 ...	

Key fields remittance advice

The following structure of the key fields is used to determine the related data records of a remittance advice:

Record type	Key field 1	Key field 2	Key field 3	Key field 4
SA1	Message reference	Network address customer		
SA2	Message reference	Customer number	Identification remittance	
SA3	Message reference	Customer number	Identification remittance	Invoice number

Network directories

The so-called network directories form the basis of the communication between the EDI subsystem and BAAN IV. These directories are established in BAAN. The network basis directories for each network will be defined in the BAAN session tcedi0120m000. For the network BEMIS, the basis directories can be indicated in the following way:

/auto3/baanIV/bemis/zahlavi

BAAN will additionally create the following subdirectories:

/auto3/baanIV/bemis/zahlavis/appl_from/

/auto3/baanIV/bemis/zahlavis/appl_to/

/auto3/baanIV/bemis/zahlavis/command/

/auto3/baanIV/bemis/zahlavis/store_recv/

/auto3/baanIV/bemis/zahlavis/store_sent/

/auto3/baanIV/bemis/zahlavis/trace/

The above mentioned directories have the following function:

- 1 `.../appl_from/`: In this directory, BAAN IV records the outgoing messages which are the defined BEMIS inhouse format files. The EDI subsystem can collect them from here.
- 2 `.../appl_to/`: The EDI subsystem writes the incoming message into this directory in the BAAN IV inhouse format.
- 3 `.../command/`: Directory of the semaphores.
- 4 `.../store_recv/`: BAAN IV stores in this directory processed incoming messages, if the configuration is accordingly. During this process an additional subdirectory by incoming message file will be created which is named with a date and time stamp indicating when the message was moved.
- 5 `.../store_sent/`: BAAN IV stores in this directory processed outgoing messages if the configuration is accordingly. During this process an additional subdirectory by incoming message file will be created which is named with a date and time stamp indicating when the message was moved.
- 6 `.../trace/`: BAAN creates under this directory a log of the incoming and outgoing messages in the processing order, if the configuration is accordingly.

For every message type one network directory will be used for outgoing and one for incoming messages. This means that one message file contains data for several business partners.

The file name of the BEMIS inhouse format file of the remittance advice, which is being described in this documentation, is defined in the following way:

Direction	File name	Network directory
outgoing	ZAHLAVIS.OUT	<code>../appl_from</code>
incoming	ZAHLAVIS.IN	<code>../appl_to</code>

BEMIS Message – Conventions

The following general rules apply to a message record in a BEMIS message file:

- 1 Every message record starts with “SAx”
- 2 Every message record ends with “SAx_END”
- 3 The length of a data record can vary.
- 4 The message record must consist of all fields, even if not every field contains a value.
- 5 The fields in the file must be separated by a ; .
- 6 All string fields have to be put in “...”.
- 7 The numerical values must not be put into “”.

When BAAN generates outgoing messages, the numerical fields are written into the inhouse format file without leading zeros. For example, for the year “0000” a “0” will be written into the BEMIS message file.

On the outgoing side numerical fields with decimal places will be used in the following way: If the decimal places equal the value zero these decimal places will not be written. For example, in the interface file the internal value ‘13.00’ will be indicated as 13.

In the following sections you will find the format descriptions for the individual record types of the interface file. The table contains the following data:

REMITTANCE ADVICE INHOUSE FORMAT				
Pos	FIELD DESCRIPTION	Key	ST	FM

The first block of the table describes the format of a record type:

Pos.	Position of the field in the data record
Field name	Description of the field
Key	Key field outgoing (O) / incoming (I)
ST	Field status mandatory (M) / conditional (C)
FM	Field format
	an..14 alphanumeric field with a maximum of 14 characters
	an14 alphanumeric field with exactly 14 characters
	n..10 numerical field with a maximum of 10 characters
	n1 numerical field with exactly 1 character

Mapping from Application Table Fields (Outcoming)

Table Field	Action
-------------	--------

The second block of the table describes the corresponding table field for outgoing messages in BAAN IV as well as the possible special actions which will be taken during the processing of the messages.

Mapping in Application Table Fields (Incoming)

Table Field	Action
-------------	--------

The third block of the table describes for outgoing messages the corresponding table field in BAAN IV as well as the possible special actions which will be taken during the processing of the message.

Following the table overview, every BAAN field is more detailed, including information about the processing in the EDI subsystem and in BAAN IV.

2 Data record description by record type

This chapter describes the record types required by the BAAN Standard In-house Message format for remittance advices.

SA1 Remittance Advice Overhead - *Nachrichten Vorsatz*

Status : Mandatory

Frequency : Once by transmission

Description: This record type supports the unambiguous identification

Data record description by record type

Definition of BEMIS 1.0a Import and Export File for the Message Type Remittance Advice

Detailed description of Remittance advice, record type SA1 Overhead

Position	1	Field format	an3	Field status	M
Field name	Record type		(Key field out/in)		

Description: This field identifies the record type in the message block. It contains the fixed value 'SA1'.

Processing outgoing

EDI subsystem:

BAAN: This field will be filled with the fixed value 'SA1'.

Processing incoming

EDI subsystem: This field will be filled with the fixed value 'SA1'.

BAAN: None

Position	2	Field format	an..14	Field status	M
Field name	Message reference		(Key field out/in)		

Description: This field identifies all connected data records of one remittance advice. The numbering, which has to be unambiguous by remittance advice, helps to control the chronological order of the remittance advice and the complete transmission. The field consists of a fix part with four characters, the current date (format: YYMMDD) and a serial number with four characters.

The special format will be defined in the network parameters in the BAAN table tcedi020. When generating the message reference with the EDI system, the created message reference needs to be specific, that means unique. While storing the message reference BAAN verifies whether it is specific.

Processing outgoing

EDI subsystem:

BAAN: BAAN generates this number to identify a remittance advice, stores it in tcedi701.bano und writes it into all data records of a remittance advice.

Processing incoming

EDI subsystem: The EDI subsystem generates this number to identify a remittance advice and writes it into all data records of a remittance advice.

BAAN: Mapping to BAAN table field tcedi702.bano.

Position	3	Field format	an..17	Field status	M
Field name	Network address customer/supplier				(Key field)

Description: This field contains on the outgoing side the network address of the supplier and on the incoming side the network address of the customer.

Processing outgoing

EDI subsystem:

BAAN: The network address is stored in the BAAN table tcedi028 'Relations by network' under the corresponding business partner (supplier) and the corresponding network in the BAAN field TFtcedi028.neta. The contents of this field is mapped to the position of the transmission file.

Processing incoming

EDI subsystem:

BAAN: The network address determines the corresponding business partner (customer) and the network in the BAAN table TBtcedi028 'Relations by network'. This identification is mapped to the BAAN field TFtcedi702.reno.

Position	4	Field format	an..17	Field status	M
Field name	Our identification in the network				(Key field)

Description: This field contains on the outgoing side our identification (customer) in the network.

Processing outgoing

EDI subsystem: None

BAAN: The identification of the customer in the used network is entered in the BAAN table tcedi020 'Networks'. The BAAN field TFtcedi028.neta is mapped to this position.

Processing incoming

EDI subsystem: Transfer of the value from the message file.

BAAN: On the incoming side this field will be ignored.

Position	5	Field format	an..6	Field status	M
Field name	Message				

Description: This field contains the code for the identification of the concerned message. The code of the message type remittance advice is Z AHLAV.

Processing outgoing

EDI subsystem:

BAAN: The internal message code tcedi001.code 'Z AHLAV' of the BAAN table tcedi001 'Supported EDI Messages' is mapped to this position.

Processing incoming

EDI subsystem: This field will be filled with the fixed value 'Z AHLAV'.

BAAN: The message code in the BAAN table tcedi001 'Supported EDI Messages' determines, which internal message is connected to this BEMIS remittance advice. In the BAAN table tcedi005 'EDI Messages' is determined for every message, which session (DII) is used in BAAN to process the BEMIS remittance advice. The message code is mapped to the BAAN table field tcedi702.mess.

Position	6	Field format	an..6	Field status	M
Field name	Organization				

Description: This field contains the organization (standard) which is used for the EDI communication.

Processing outgoing

EDI subsystem:

BAAN: The internal organisation code tcedi003.code 'BEMIS' from the BAAN table tcedi003 'Organizations' is mapped to this position.

Processing incoming

EDI subsystem: This field will be filled with the fixed value 'BEMIS'.

BAAN: Mapping to BAAN field TFtcedi702.orga.
The corresponding organization must have been entered into the BAAN table tcedi003.

Position	7	Field format	an..35	Field status	M
Field name	Order Type				

Description: This field contains a code for the concerned order type.

Processing outgoing

EDI subsystem:

BAAN: In BAAN table tcedi011 there must be an entry for this order type in connection with the appropriate message and organization. The BAAN table field tcedi011.koor is mapped to this position. It is empty, that means (.,;"";..) .

Processing incoming

EDI subsystem: This field is filled with a blank.

BAAN: Mapping to BAAN field TFtcedi702.koor.
In BAAN table tcedi200 there must be an entry for this order type in connection with the appropriate message and organization.

Position	8	Field format	an..35	Field status	M
Field name	Order reference				

Description: This field contains a code for the order reference.

Processing outgoing

EDI subsystem:

BAAN: The position will not be filled; here (...;““;...).

Processing incoming

EDI subsystem: Transmission of the value from the transmission file.

BAAN: Mapping to BAAN field TFtcedi702.msno

Position	9	Field format	n..6	Field status	M
Field name	Transmission date				

Description: This field contains on the outgoing side the current date, on which the message was created. On the incoming side, this field contains the arrival date of the message at the EDI subsystem (format: YYMMDD).

Processing outgoing

EDI subsystem:

BAAN: Mapping of the current date to the position.

Processing incoming

EDI subsystem: Entry of the arrival date of the message at the EDI subsystem.

BAAN: Mapping to BAAN table field tcedi702.send.

Position	10	Field format	n..4	Field status	M
Field name	Transmission time				

Description: This field contains on the outgoing side the time, when the message was created. On the incoming side, the field contains the arrival time of the message at the EDI subsystem (format: HHMM).

Processing outgoing

EDI subsystem:

BAAN: Mapping of the current time to the position.

Processing incoming

EDI subsystem: Entry of the arrival time of the message at the EDI subsystem.

BAAN: Mapping to BAAN table field tcedi702.send.

Position	11	Field format	an..14	Field status	M
Field name	Transmission number old				

Description: This field contains the reference number of the previous transmission.

Processing outgoing

EDI subsystem:

BAAN: The position will not be filled; here (.,;.,;.).

Processing incoming

EDI subsystem: Transmission of the value from the transmission file.

BAAN: Mapping to BAAN table field tcedi702.prho.

Position	12	Field format	an7	Field status	M
Field name	End of record marker				

Description: This field indicates the end of the record. It contains the fixed value 'SA1_END'.

Processing outgoing

EDI subsystem:

BAAN: The field will be filled with the fixed value 'SA1_END'.

Processing incoming

EDI subsystem: The field will be filled with the fixed value 'SA1_END'.

BAAN: None

SA2 Remittance Advice Header – *Kopfdaten Zahlungsavis*

Status : Mandatory

Frequency: Once by remittance advice

Description: This record type is used for the transmission of remittance-related data. The record contains information about the identification, the date and the total amount of a payment order to a creditor. This record type is available exactly once for every remittance number. All records up to the next record of the type SA2 refer to the same remittance number.

REMITTANCE ADVICE INHOUSE FORMAT					Mapping from Application Table Fields (out)	Mapping to Application Fields (in)

12.	End of record marker (Satzendekennzeichen) Fixed value "SA2_END"	M	an7			

Detailed description of Remittance advice, record type SA2 Remittance Advice Header

Position	1	Field format	an3	Field status	M
Field name		Record type		(Key field)	

Description: The field identifies the record type in the message block. It contains the fixed value 'SA2'.

Processing outgoing

EDI subsystem: None

BAAN: The position will be filled with the fixed value 'SA2'.

Processing incoming

EDI subsystem: The position will be filled with the fixed value 'SA2'.

BAAN: None

Data record description by record type

Position	2	Field format	an..14	Field status	M
Field name	Message reference		(Key field)		

Description: This field identifies all connected data records of one remittance advice. The numbering, which has to be unambiguous by remittance advice, helps to control the chronological order of the remittance advice and the complete transmission. The field consists of the current date (format: YYMMDD) and a serial number with four characters.

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tcedi701.bano to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping of position value to BAAN table field TFtcedi702.bano.

Position	3 out	Field format	an..6	Field status	M
Field name	Supplier number		(Key field out)		

Description: This field contains the identification number which the customer applied to the supplier.

Processing outgoing

EDI subsystem:

BAAN: Mapping of BAAN table field tdpsc002.suno to position.

Position	3 in	Field format	an..17	Field status	M
Field name	Network address customer				(Key field in)

Description: This field contains the network address of the customer.

Processing incoming

EDI subsystem: Transmission of value from message file.

BAAN: The corresponding business partner and network are determined on the basis of the network address in the BAAN table tcedi028 'Relations by network'. This business partner identification is mapped to the BAAN table field tcedi702.reno.

Position	4	Field format	an..6	Field status	M
Field name	Payment advice number /id. remittance				(Key field)

Description: This field contains the unambiguous identification of the remittance. It serves as link between the EDI remittance advice and the actual receipt of payment.

Processing outgoing

EDI subsystem: None

BAAN: TFtfcmg103.btno will be written to TFtfcmg103.rgar and then used as alphanumeric field. Mapping BAAN table field TFtfcmg103.rgar to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tfcmg.506.stat.

Position	5	Field format	n..13	Field status	M
Field name	Total payment amount / total amount remittance				

Description: This field contains the total amount of the invoice, including VAT and minus discount. It contains a numerical value (format: ,NNNNNNNNNN.NN')

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg103.amnt to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tfcmg506.amnt.

Position	6	Field format	n..13	Field status	M
Field name	Total discount amount				

Description: This field contains the total discount amount. It contains a numerical value (format: ,NNNNNNNNNN.NN').

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg103.disa to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tfcmg506.disa.

Position	7	Field format	an..3	Field status	M
Field name	Payment type				

Description: This field contains the encoded payment type which is defined as follows:
 0 = not yet defined
 1 = check
 2 = remittance
 3 = bill of exchange
 4 = check / bill of exchange
 5 = clearing debtor
 6 = electronical bill of exchange

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN field value TFtfcmg103.paym to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tfcmg506.paym.

Position	8	Field format	an..6	Field status	M
Field name	Supplier number				

Description: This field contains the identification number which the customer applied to a supplier.

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg103.suno to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tccom010.osno.

Position	9	Field format	an..	Field status	M
Field name	Customer number				

Description: This field contains the identification number which the supplier applied to a customer.

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tcom020.ocus to position.

Processing incoming

EDI subsystem: This field will not be filled, that means (...;"";...).

BAAN: None

Position	10	Field format	n...6	Field status	M
Field name	Transmission date				

Description: This field contains the date of the transmission (format: YYMMDD).

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field date() to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tcmg506.std.

Position	11	Field format	n..6	Field status	M
Field name	Payment date				

Description: This field contains the date of the payment (format: YYMMDD).

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg103.plan to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tfcmg506.plan.

Position	12	Field format	an7	Field status	M
Field name	End of record marker				

Description: The field indicates the end of the record. It contains the fixed value 'SA2_END'.

Processing outgoing

EDI subsystem: None

BAAN: The field will be filled with the fixed value 'SA2_END'.

Processing incoming

EDI subsystem: The field will be filled with the fixed value 'SA2_END'.

BAAN: None

SA3 Remittance Advice Line – Positionsdaten

Status : Mandatory

Frequency :

Description: This record type supports the transmission of individual lines of the remittance advice to the creditor. These instructions refer to the corresponding identification of the remittance advice which is indicated in the previous record type SA2.

REMITTANCE ADVICE INHOUSE FORMAT					Mapping from Application Table Fields (out)		Mapping to Application Fields (in)

Detailed description of Remittance advice, record type SA3 Remittance Advice Line

Position	1	Field format	an3	Field status	M
Field name		Record type		(Key field)	

Description: This field identifies the record type in the message block. It contains the fixed value 'SA3'.

Processing outgoing

EDI subsystem: None

BAAN: This field will be filled with the fixed value 'SA3'.

Processing incoming

EDI subsystem: This field will be filled with the fixed value 'SA3'.

BAAN: None

Position	2	Field format	an..14	Field status	M
Field name	Message reference		(Key field)		

Description: This field identifies all connected data records of one remittance advice. The numbering, which has to be unambiguous by remittance advice, helps to control the chronological order of the remittance advice and the complete transmission. The field consists of the current date (format: YYMMDD) and a serial number with four characters.

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tcedi701.bano to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping position value to BAAN table field tcedi702.bano.

Position	3 out	Field format	an..6	Field status	M
Field name	Supplier number		(Key field out)		

Description: This field contains the identification code which the customer applied to the supplier.

Processing outgoing

EDI subsystem:

BAAN: Mapping of BAAN table field tdpsc002.suno to position.

Position	3 in	Field format	an..17	Field status	M
Field name	Network address customer		(Key field in)		

Description: This field contains the network address of the customer.

Processing incoming

EDI subsystem: Transmission of the value from the message file.

BAAN: The network address determines in the table tcedi028 'Relations by network' the corresponding business partner and network. The business partner identification is mapped to the BAAN table field tcedi702.reno.

Position	4	Field format	an..6	Field status	M
Field name	Payment advice number / Id. remittance (Key field)				

Description: This field contains the unambiguous identification of the remittance. It serves as link between the EDI remittance advice and the actual receipt of payment.

Processing outgoing

EDI subsystem: None

BAAN: TFtfcmg103.btno will be written to TFtfcmg103.rgar and then used as alphanumerical field. Mapping of BAAN table field TFtfcmg103.rgar to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tfcmg.506.stat.

Position	5	Field format	an.15	Field status	M
Field name	Invoice number (Key field)				

Description: This field contains the identification number which the supplier applied to an invoice which he created.

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg101.refr to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping of field value to BAAN table field tfcmg501.pref.

Position	6	Field format	n1	Field status	M
Field name	Document type				

Description: This field contains the transaction key.
 BEMIS: 1 equals 01 = invoice
 BEMIS: 4 equals 03 = your self-billed invoice

Processing outgoing

EDI subsystem: None

BAAN: Mapping BAAN table field tfcmg101.ttyp to position.

Processing incoming

EDI subsystem: Not used at the moment, that means (...;;...).

BAAN: None

Position	7	Field format	an..3	Field status	C
Field name	Currency unit		(Key field)		

Description: This field contains the invoice amount.
 The currency code is defined according to ISO 4217 (e.g. DEM for German mark)

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg101.curr to position and conversion of field to BAAN-specific currency description using the code and conversion tables in the session SETcedi3128m000 "Maintain Conversion of Currency Codes (out)".

Processing incoming

EDI subsystem: None

BAAN: Mapping of field value to BAAN table field tfcmg501.curr and conversion of field to BAAN-specific currency description using the code and conversion tables in the session SETcedi3124m000 "Maintain Conversion of Currency Codes (in)".

Position	8	Field format	n..13	Field status	M
Field name	Invoice amount incl. VAT depending on document type				

Description: This field contains the amount of the single invoice. This field contains a numerical value (format: ,NNNNNNNNNN.NN') including value sign.

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg101.amnt to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping of field value to BAAN table field tfcmg501.amnt.

Position	9	Field format	n..13	Field status	M
Field name	Discount amount				

Description: This field contains the discount amount. It contains a numerical value (format: ,NNNNNNNNNN.NN') including the value sign.

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfcmg101.amnt to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping field value to BAAN table field tfcmg501.disa.

Data record description by record type

Position	10	Field format	n..6	Field status	M
Field name	Invoice date				

Description: This field contains the invoice date (format: YYMMDD).

Processing outgoing

EDI subsystem: None

BAAN: Mapping of BAAN table field tfacp200.docd to position.

Processing incoming

EDI subsystem: None

BAAN: Mapping of field value to BAAN table field tfcmg501.docd.

Position	11	Field format	an7	Field status	M
Field name	End of record marker				

Description: This field indicates the end of the record. It contains the fixed value 'SA3_END'.

Processing outgoing

EDI subsystem: None

BAAN: The field will be filled with the fixed value 'SA3_END'.

Processing incoming

EDI subsystem: The field will be filled with the fixed value 'SA3_END'.

BAAN: None

5 Glossary of terms and abbreviations

ABRUF	Schedule
Appl	Application
ANSI	American National Standards Organization
BEM	Baan Electronic Message - abbreviated form of BEMIS used with the definition of the EDI organization
BEMIS	Baan Electronic Message Interchange System
Business partner (BP)	Customer or supplier
C	Conditional, that is, optional message
Defaults.edi	Export file detailing master EDI data
DELINS	Odette Delivery Instruction (Schedule)
Directory	Folder
EDI	Electronic Data Interchange; electronic exchange of documents in standard formats
EDIFACT	Electronic Data Exchange For Administration, Commerce and Transport. An ISO standard.
ELP	External Logistic partner
Evaluation expression	If statement in the conversion setup for outgoing messages
ISO	International Standards Organization
ISO 4217	Code table
M	Mandatory (compulsory) message
MAIS	General Motor's interpretation of the subset of EDIFACT DELJIT Message
Messg	Message
Network address	Folder (directory) path on network
ODDC	Odette Code Table
ODDC25	Odette Code Table 25
ODETTE	European standard for electronic data exchange
Org	Organization, that is, system
SCH	Supply Chain
Semaphore	Method to show a status using files with zero length

Glossary of terms and abbreviations

Translation	Conversion of one data format to another, for example Baan in-house data format to ODETTE
VAT	Value Added Tax (tax on turnover; sales tax)
VDA	Standard used for electronic data exchange in Germany
X12	Standard used for electronic data exchange in the United States
