About this guide

This document describes the content and the corresponding structure of the EDI message “Material Release”, which is supported by Baan Electronic Message, the ERP LN in-house format.

The message’s content refers to the following “Long – Time Delivery Instruction” origin message types and gives their attribution to the transferred ASCII file of the BEMIS format:

- EDIFACT DELFOR
- ANSI X12 830
- VDA 4905

The message structure is defined by referring to incoming directions and outgoing directions.

The document contains the following chapters:

Chapter 1, “General Principles”, provides a general introduction to the EDI in-house format for the Business Document type Material Release.

Chapter 2, “Data Record Description by Kind of Data Record”, describes in detail the data records used for the EDI in-house format of EDI message Material Release.

Chapter 3, “Definitions, Acronyms, and Abbreviations”, provides a glossary of terms used in Infor ERP LN and in this document, and also a list of abbreviations.

Appendix A, “Sample File”, provides a sample file for the outgoing message MRL001.

Intended audience

This document is intended for the following categories of users:

- Users who want to understand what the processed information of the EDI messages in ERP LN are.
- Users who develop the translation from external EDI format to the in-house format.

Available types of data records

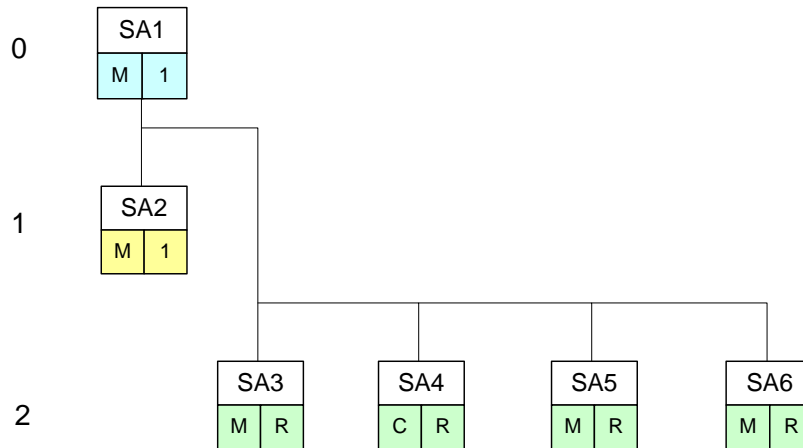

This section describes the EDI In-house format for the Business Document type Material Release (incoming/outgoing). When you transmit information about material releases, the use of the following types of data records is conditional (C) or respectively mandatory (M).

ID	Status	Name
SA1	M	Global Overhead
SA2	M	Release Header
SA3	M	Schedule Header
SA4	C	Schedule Header Text
SA5	M	Authorizations
SA6	M	Schedule Lines

Branching diagrams

The following data record structure is used for the BEMIS message type Material Release:

R: repeatable by message

For example, for two required releases with each two schedules the BEMIS file has the following structure:

SA1 ... Global Overhead

SA2 ... Release Header 1

SA3 ... Schedule Header 1

SA5. .. Authorizations 1

SA6 ... Schedule Line 11

SA6 ... Schedule Line 12
SA3 ... Schedule Header 2

SA5... Authorizations
SA6 ... Schedule Line 11
SA3 ... Schedule Header 2
SA4.... Schedule Text 2
SA5 ... Authorizations 2
SA6 ... Schedule Line 21
SA6 ... Schedule Line 22
SA6 ... Schedule Line 23

Key fields outgoing

The outgoing message refers to the Buy-from-BP and the Purchase Schedule Release. The following structure of the key fields is used to determine the corresponding data records of a Material Release message:

Sorted by Key						
Kind Data Rec.	Key 1	Key 2	Key 3	Key 4	Key 5	Key 6

SA5	3	Message ref. BP net ID	Release	Release revision	Release Position	Schedule
SA6	3	Message ref. BP net ID	Release	Release revision	Release Position	Schedule

Key fields incoming

The incoming message refers to the Sold-to-BP and the Sales Schedule Releases. The following structure of the key fields is used to determine the corresponding data records of a Material Release message:

Sorted by Key						
Kind Data Rec.	Key 1	Key 2	Key 3	Key 4	Key 5	Key 6
field 1	Backpt.					
SA1	Message ref. BP net ID

SA5	3	Message ref. BP net ID	Release	Release revision	Release Position	Schedule
SA6	3	Message ref. BP net ID	Release	Release revision	Release Position	Schedule

Business partner relations

The following table shows the business partner relations:

Outgoing Schedule Releases		Incoming Schedule Releases	
ID of the sender	ecedi020.neta	Sold-to BP Code	tdsls312.ofbp
Ship-From BP-Code	tdpur320.sfbp	Warehouse Code	tdsls315.cwar
Warehouse Code	tdpur320.cwar	Ship-to BP Code	tdsls312.stbp
Ship-to Address Code	tdpur320.stad	Ship-to Address Code	tdsls312.stad

Network directories

In the Direct Network Communication (ecedi7205m000) session, the user can receive and generate EDI messages.

As written in the User's Guide EDI Business Document [2], the communication is done between the EDI Sub-System and ERP LN to transfer the message's ASCII files across the specific network. This communication is based on the network directories that are established in ERP LN.

The network basis directories for each network will be defined in the ecedi0120m000 session.

The ERP LN user can decide the structure of the used network directories, such as the following:

- For every message type, one network directory can be used for outgoing messages and one can be used for incoming messages. This means that one message file contains data for several business partners.
- For a group of message types, such as schedules, one network directory can be used for outgoing messages and one can be used for incoming messages.
- Every business partner can use their own network directory, and the files would be able to contain data for several messages types.

Infor recommends using the first possibility or the second possibility if the MRL001 could be specified by Shipping Schedules [3].

For the network BEMIS, for example, the basis directories can be indicated in the following way:

- /\${BSE}/edi/bemis/schedule/

ERP LN will additionally create the following subdirectories:

- `/${BSE}/edi/bemis/schedule/appl_from/`
- `/${BSE}/edi/bemis/schedule/appl_to/`
- `/${BSE}/edi/bemis/schedule/command/`
- `/${BSE}/edi/bemis/schedule/store_rcv/`
- `/${BSE}/edi/bemis/schedule/store_sent/`
- `/${BSE}/edi/bemis/schedule/trace/`

The above mentioned directories refer to one message type, “material release”. The directories have the following functions:

- **.../appl_from/:** In this directory, ERP LN records the outgoing messages that are the defined BEMIS in-house format files. The EDI Subsystem can collect them from here.
- **.../appl_to/:** The EDI Subsystem writes the incoming message into this directory in the ERP LN in-house format.
- **.../command/:** A directory of the semaphores.
- **.../store_rcv/:** ERP LN stores processed incoming messages in this directory, if the corresponding EDI parameter is set in this way. During this process, an additional subdirectory by incoming message file is created; the subdirectory is named with a date and time stamp that indicates when the message was moved.
- **.../store_sent/:** ERP LN stores processed outgoing messages in this directory, if the corresponding EDI parameter is set in this way. During this process, an additional subdirectory by incoming message file is created; the subdirectory is named with a date and time stamp that indicates when the message was moved.
- **.../trace/:** ERP LN creates a log of the incoming messages and outgoing messages in the processing order in this directory, if the corresponding EDI parameter is set in this way.

The file name of the BEMIS in-house format files of the material release, which is being described in this documentation, is defined in the following way:

Direction	File Name	Network Directory
outgoing	INV100	<code>/\${BSE}/edi/bemis/invoice/appl_from</code>
incoming	INV100	<code>/\${BSE}/edi/bemis/invoice/appl_to</code>

ERP LN BEMIS messages – conventions

Written in the User's Guide for BEMIS [1], we use the following rules to structure the EDI message:

- Each data segment is defined by a unique code in an EDI message. The format of the data segment code is SA99. Each segment (message record) starts with the unique code "Sax"; the message record ends with "SAx_END".
- The length of the several data segments can vary.
- Even if some fields do not contain a value, each data segment (message record) must consist of all fields.
- The fields in the file must be separated by a defined sign, such as a semicolon (;)
- A filled string field must be put inside quotation marks ("....").
- If a position in a BEMIS Message File is not taken by a value, which means that the position is empty, then the position is pointed out using two semicolons. Also, the ERP LN EDI Module distinguishes between numerical data and alphanumeric data format, as shown in the following examples:

Empty numerical Position: "SAx"; ... ;; ... ;"SAx_END"

Empty alphanumeric Position: Infor differs between the following, in case the field exists in the LN database:

"SAx"; ... ;; ... ;"SAx_END" and "SAx"; ... ;""; ... ;"SAx_END"

In the following sections are the format descriptions of the individual types of data segments (message records) of the interface file. The table contains the following data:

INVOICE IN-HOUSE FORMAT				
Pos	Field description	Key	ST	FM

The first block of the table describes the format of a type of data record:

Pos	Position of the field in the data record
Field description	Description of the field
Key	Key field outgoing (O) / incoming (I)
ST	Field status mandatory (M) / conditional (C)
FM	Field format, for example. an..14 = alphanumerical field with a maximum of 14 characters an14 = alphanumerical field with exactly 14 characters n..10 = numerical field with a maximum of 10 characters n1 = numerical field with exactly 1 character

The second block of the table describes the corresponding table field in ERP LN and describes possible special actions, which will be carried out when the messages are being processed.

from Application Table Field (out) / Mapping to Table Field (in)

Table Field	Action

Following the table overview, every field is described in a more detailed way, including information about the processing in the EDI Sub-System and in ERP LN.

Consider one exception: if a position of the data record is not currently used, then Infor omits the detailed description of this empty position.

What is new in comparison to BEMIS for BAAN V?

The EDI Delivery Schedule Message referring to the EDIFACT DELFOR could not be processed in Baan V standard software.

The ERP LN includes the EDI Schedule processing similarly to the Purchase and Sales Schedule application of the Baan IV SCH / SCC / AGS versions.

Additionally the ERP LN In-house format considers the processing of several schedule's releases. The release gives a possibility to collect several schedules and to track the transferred schedules of a Business Partner.

The covering is done by the mandatory data record SA2 in MRL. A schedule release is only used for the EDI processing.

What is new in comparison to BEMIS for Feature Pack 3 for Infor ERP LN 6.1?

The new version is based on the version for Feature Pack 3 for Infor ERP LN 6.1 and can only be used up from Feature Pack 6 for ERP LN 6.1.

The new defaults for Incoming direction are now based on release tables (tdsls308 and tdsls315).

Changes SA6 – Schedule Lines

Field Number	Outgoing	Incoming
40 – new	NA	tdsls315.dlpt
45 - new	SA6_END old position was 40	NA
