About this Guide

Objective

This document describes the content and the corresponding structure of the EDI message "Trading Invoice", which is supported by Baan Electronic Message, the ERP LN in-house format.

The message's content refers to the following origin message types and gives their attribution to the transferred ASCII file of the BEMIS format:

- EDIFACT   INVOIC
- ANSI X12   810
- VDA   4906

The message structure is defined by referring to incoming directions and outgoing directions.

The document contains the following chapters:

Chapter 1, "General Principles", provides a general introduction to the EDI in-house format for the Business Document type Trading Invoice.

Chapter 2, "Data Record Description by Kind of Data Record", describes in detail the data records used for the EDI in-house format of EDI message Trading Invoice.

Chapter 3, "Definitions, Acronyms, and Abbreviations", provides a glossary of terms used in Infor ERP LN and in this document, and also a list of abbreviations.

Appendix A, "Sample File", provides a sample file for the outgoing message INV001.

Intended audience

This document is intended for the following categories of users:

- Users who want to understand what the processed information of the EDI messages in ERP LN are.

- Users who develop the translation from external EDI format to the in-house format.

Chapter 1
General Principles

Available types of data records

This section describes the EDI in-house format for the Business Document type Trading Invoice (incoming/outgoing). When you transmit information about invoices, the use of the following types of data records is conditional (C) or respectively mandatory (M).

ID	Status	Name
SA1	M	Global Overhead
SA2	M	Invoice Header
SA3	C	Invoice Header Specific Addresses
SA4	C	Invoice Header Text
SA5	C	Tax Lines
SA6	M	Invoice Lines
SA7	C	Invoice Line's Text
SA8	C	Invoice Line's Specific Delivery Address

Branching diagrams

The following data record structure is used for the BEMIS message type Trading Invoice:

Level

Legend:

Status:
M: mandatory in message
C: conditional in message

Frequency:
1: once by message
R: repeatable by message
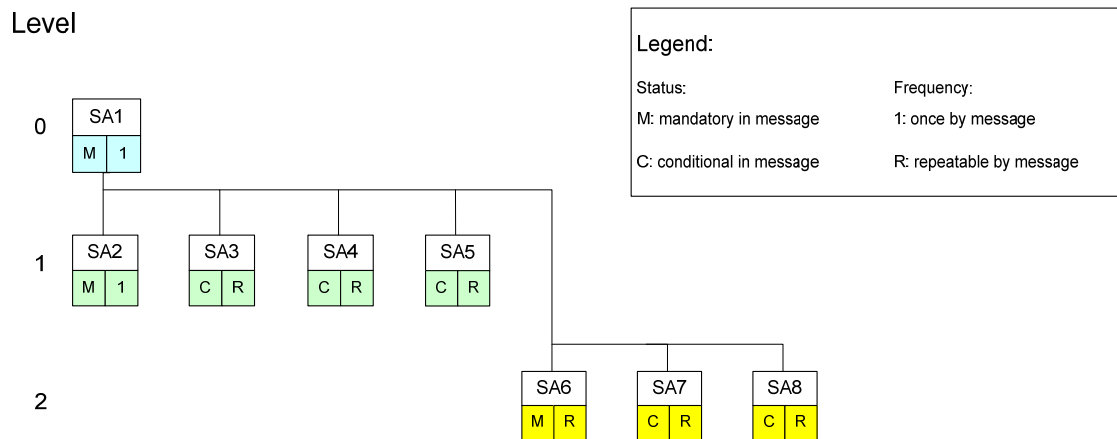

For example, two invoices with two lines each the BEMIS file has the following structure:

SA1 ... ERP LN Envelop

    SA2 ... Invoice Header 1

    SA3 … Invoice Header 1 Addresses

    SA4 ... Invoice Header 1 Text

        SA6 ... Invoice Line Item 11

        SA7.... Invoice Line text

        SA8 … Line's Delivery Address

        SA6 ... Invoice Line Item 12

        SA7 ... Invoice Line text

        SA8 …Line's Delivery Address

SA1 ... ERP LN Envelop

    SA2 ... Invoice Header 2

    SA3 … Invoice Header 2 Addresses

        SA6 ... Invoice Line Item 21

        SA7 ... Invoice Line text

SA6 ... Invoice Line Item 22

SA7 ... Invoice Line text

SA8 … Line's Delivery Address

If an Invoice Line's Delivery Address (SA8) is not used for an item then the Invoice Header Address (SA4) is defaulted to the line's delivery address in ERP LN.

If an Invoice Line's Delivery Address (SA8) is used for an item then this delivery address is the valid address for this item.

Key fields outgoing

The outgoing message refers to the Invoice-to-BP and the Sales Invoice.
The following structure of the key fields is used to determine the corresponding data records of an invoice message:

Sorted by key Kind Data Rec.		key 1	key 2	key 3	key 4	key 5	key 6	key 7
field 1	Backpt.							
SA1		Message Reference	BP network ID					
SA2	**1**	Message Reference	BP network ID					
SA3	**2**	Message Reference	BP network ID	Transaction Type	Document Number	Sales/WH Order		
SA4	2	Message Reference	BP network ID	Transaction Type	Document Number	Sales/WH Order		
SA5	2	Message Reference	BP network ID	Transaction Type	Document Number	Sales/WH Order		
SA6	2	Message Reference	BP network ID	Transaction Type	Document Number	Sales/WH Order		
SA7	**6**	Message Reference	BP network ID	Transaction Type	Document Number	Sales/WH Order	Inv. Line Number	Sequence Number
SA8	6	Message Reference	BP network ID	Transaction Type	Document Number	Sales/WH Order	Inv. Line Number	Sequence Number

Key fields incoming

The incoming message refers to the Invoice-from-BP and the Purchase Invoice. The following structure of the key fields is used to determine the corresponding data records of an invoice message:

Sorted by key Kind Data Rec.		key 1	key 2	key 3	key 4	key 5	key 6	key 7
field 1	Backpt							
SA1		Message Reference	BP network ID					
SA2	**1**	Message Reference	BP network ID					
SA3	**2**	Message Reference	BP network ID	Transaction Type	Document Number	Purchase Order		
SA4	2	Message Reference	BP network ID	Transaction Type	Document Number	Purchase Order		
SA5	2	Message Reference	BP network ID	Transaction Type	Document Number	Purchase Order		
SA6	2	Message Reference	BP network ID	Transaction Type	Document Number	Purchase Order		
SA7	**6**	Message Reference	BP network ID	Transaction Type	Document Number	Purchase Order	Inv. Line Number	Sequence Number
SA8	6	Message Reference	BP network ID	Transaction Type	Document Number	Purchase Order	Inv. Line Number	Sequence Number

Business partner relations

The following table shows the business partner relations:

Outgoing Sales Invoice		Incoming Purchase Invoice	
ID of the sender	ecedi020.neta	Invoice-from BP Code	tfacp200.ifbp
Ship-to BP Code	cisli205.stbp cisli245.stbp		
Invoice-to BP Code	cisli205.itbp	Invoice-from BP Code	tfacp200.ifbp

Network directories

In the Direct Network Communication (ecedi7205m000) session, the user can receive and generate EDI messages.

As written in the User's Guide EDI Business Document [2], the communication is done between the EDI Sub-System and ERP LN to transfer the message's ASCII files across the specific network. This communication is based on the network directories that are established in ERP LN.

The network basis directories for each network will be defined in the ecedi0120m000 session.

The ERP LN user can decide the structure of the used network directories, such as the following:

- For every message type, one network directory can be used for outgoing messages and one can be used for incoming messages. This means that one message file contains data for several business partners.

- For a group of message types, such as invoices, one network directory can be used for outgoing messages and one can be used for incoming messages.

- Every business partner can use their own network directory, and the files would be able to contain data for several messages types.

Infor recommends the second possibility.

For the network BEMIS, for example, the basis directories can be indicated in the following way:

- /${BSE}/edi/bemis/invoice/

ERP LN will additionally create the following subdirectories:

- /${BSE}/edi/bemis/invoice/appl_from/
- /${BSE}/edi/bemis/invoice/appl_to/
- /${BSE}/edi/bemis/invoice/command/
- /${BSE}/edi/bemis/invoice/store_recv/
- /${BSE}/edi/bemis/invoice/store_sent/
- /${BSE}/edi/bemis/invoice/trace/

The above mentioned directories refer to one message type, "trading invoice". The directories have the following functions:

- **.../appl_from/:** In this directory, ERP LN records the outgoing messages that are the defined BEMIS in-house format files. The EDI Subsystem can collect them from here.

- **.../appl_to/:** The EDI Subsystem writes the incoming message into this directory in the ERP LN in-house format.

- **.../command/:** A directory of the semaphores.

- **.../store_recv/:** ERP LN stores processed incoming messages in this directory, if the corresponding EDI parameter is set in this way. During this process, an additional subdirectory by incoming message file is created; the subdirectory is named with a date and time stamp that indicates when the message was moved.

- **.../store_sent/:** ERP LN stores processed outgoing messages in this directory, if the corresponding EDI parameter is set in this way. During this process, an additional subdirectory by incoming message file is created; the subdirectory is named with a date and time stamp that indicates when the message was moved.

- **…/trace/:** ERP LN creates a log of the incoming messages and outgoing messages in the processing order in this directory, if the corresponding EDI parameter is set in this way.

The file name of the BEMIS in-house format files of the trading invoice, which is being described in this documentation, is defined in the following way:

Direction	File Name	Network Directory
outgoing	INV001	/${BSE}/edi/bemis/invoice/appl_from
incoming	INV001	/${BSE}/edi/bemis/invoice/appl_to

ERP LN BEMIS messages – conventions

Written in the User's Guide for BEMIS [1], we use the following rules to structure the EDI message:

- Each data segment is defined by a unique code in an EDI message. The format of the data segment code is SA99. Each segment (message record) starts with the unique code "Sax"; the message record ends with "SAx_END".

- The length of the several data segments can vary.

- Even if some fields do not contain a value, each data segment (message record) must consist of all fields.

- The fields in the file must be separated by a defined sign, such as a semicolon (;)

- A filled string field must be put inside quotation marks ("....").

- If a position in a BEMIS Message File is not taken by a value, which means that the position is empty, then the position is pointed out using two semicolons. Also, the ERP LN EDI Module distinguishes between numerical data and alphanumerical data format, as shown in the following examples:

Empty numerical Position: "SAx"; … ; ; … ;"SAx_END"

Empty alphanumerical Position: Infor differs between the following, in case the field exists in the LN database:

"SAx"; … ; ; … ;"SAx_END" and "SAx"; … ; ""; … ;"SAx_END"

In the following sections are the format descriptions of the individual types of data segments (message records) of the interface file. The table contains the following data:

INVOICE IN-HOUSE FORMAT

Pos	Field description	Key	ST	FM

The first block of the table describes the format of a type of data record:

Pos   Position of the field in the data record

Field description   Description of the field

Key   Key field outgoing (O) / incoming (I)

ST   Field status mandatory (M) / conditional (C)

FM   Field format, for example.

                          an..14 = alphanumerical field with a maximum of 14 characters

                          an14   = alphanumerical field with exactly 14 characters

                          n..10   = numerical field with a maximum of 10 characters

                          n1   = numerical field with exactly 1 character

The second block of the table describes the corresponding table field in ERP LN and describes possible special actions, which will be carried out when the messages are being processed.

from Application Table Field (out) / Mapping to Table Field (in)

Table Field	Action

Following the table overview, every field is described in a more detailed way, including information about the processing in the EDI Sub-System and in ERP LN.

Consider one exception: if a position of the data record is not currently used, then Infor omits the detailed description of this empty position.

What is new in comparison to BEMIS for BAAN V?

- New message structure: 8 Data Segments instead of 7 before

  o   Each invoice line level use an separate text data record

- The item identification is done referring to the Alternative Item Code System by the only qualifier in ecedi232.code – default value is "SA".

Detailed description: Invoice

Kind of data record: SA1 Message Overhead

Position	1	Field Format	an3	Field Status	M
Field Name		**Kind of Data Record**		Key field Out / IN	

Description	This field identifies the kind of data record in the message block. It contains the constant value 'SA1'.
Processing outgoing EDI Sub-System	
ERP LN	This field will be filled with the constant value 'SA1'.
Processing Incoming EDI Sub-System	This field will be filled with the constant value 'SA1'.
ERP LN	None

Position	2	Field Format	an..14	Field Status	M
Field Name		**Message Reference**		Key field Out / IN	

Description	This field identifies all connected data records of one invoice. The numbering, which has to be clear by invoice, helps to control the chronological order of the invoices and the complete transmission. The field consists of a fix item with four characters, the current date (format: YYMMDD) and a serial number with four characters.
	The special format will be defined in the network parameters in the ERP LN table ecedi020. When generating the message reference with the EDI Sub-System, the created message reference needs to be specific, which means unique. While storing the message reference ERP LN controls whether it is specific.
Processing outgoing EDI Sub-System	
ERP LN	ERP LN generates this number to identify an invoice, stores it in the ERP LN table field ecedi701.bano and writes it into all data records of an invoice.
Processing Incoming EDI Sub-System	The EDI Sub-System generates this number to identify an invoice and writes it into all data records of an invoice.
ERP LN	Mapping to ERP LN table field ecedi702.bano.

Position	3	Field Format	an..17	Field Status	M
Field Name		**Net ID of sender**		**Key field Out / In**	

Description	This field contains the identification of the sender (for example the ILN Number)
Processing outgoing EDI Sub-System	Transmission of the value from the message file.
ERP LN	The identification is stored in the ERP LN table ecedi020 'Our Identification' under the corresponding network in the ERPLN table field ecedi020.neta. The content of this field is mapped to the position of the transmission file. Here you can store the general ILN-Number for your customer.
Processing Incoming EDI Sub-System	
ERP LN	The identification of the sender determines the corresponding business partner (customer) and the network in the table ecedi028 'Relations by network'. This identification is mapped to the ERP LN table field ecedi702.bpid.

Position	4	Field Format	an..3	Field Status	M
Field Name		**Sales Invoice Transaction Type**			

Description	This field contains the transaction type of the sales invoice
Processing outgoing EDI Sub-System	Transmission of the value from the message file.
ERP LN	The sales invoice transaction type is stored in the ERP LN table 'Invoice-Source Relations' in table field cisli205.ityp and is mapped to this position.
Processing Incoming EDI Sub-System	
ERP LN	

Position	5	Field Format	an..17	Field Status	M
Field Name		**Invoice Document Number**			

Description This field contains the transaction type of the sales invoice

Processing outgoing
EDI Sub-System Transmission of the value from the message file.

ERP LN The sales invoice document number is stored in the ERP LN table 'Invoice-Source Relations' in table field cisli205.idoc and is mapped to this position.

Processing Incoming
EDI Sub-System Transmission of the value from the message file.

ERP LN Mapping to ERP LN table field ecedi702.msno

Position	6	Field Format	an..9	Field Status	M
Field Name		**Order Number**			

Description This field contains the Order Number

Processing outgoing
EDI Sub-System Transmission of the value from the message file.

ERP LN The sales order or the warehouse order, from which the invoicing data was generated, is stored in the ERP LN table 'Sales and Warehouse Order Invoice Headers' in table field cisli240.slso and is mapped to this position.

Processing Incoming
EDI Sub-System

ERP LN

Position	7	Field Format	an..17	Field Status	M
Field Name		**Net ID of Receiver**			

Description	This field contains the identification of receiver.
Processing outgoing EDI Sub-System	
ERP LN	The identification of the receiver (for example the ILN of the receiver) in the used network is entered in the table ecedi028. The ELP LN table field ecedi028.neta is mapped to this position.
Processing Incoming EDI Sub-System	Transmission of the value from the message file.
ERP LN	On the incoming side this field will be ignored.

Position	8	Field Format	an..6	Field Status	M
Field Name		**Organization**			

Description	This field contains the organization (Standard), which is used for the EDI communication.
Processing outgoing EDI Sub-System	
ERP LN	The internal organization code ecedi003.code 'BEMIS' from the ERP LN table ecedi003 'Organizations' is mapped to this position.
Processing Incoming EDI Sub-System	This field will be filled with the constant value 'BEMIS'.
ERP LN	Mapping to ERP LN table field ecedi702.orga. The corresponding Organization must have been entered into the ERP LN table ecedi003.None

Position	9	Field Format	an..6	Field Status	M
Field Name		**Message**			

Description	This field contains the code for the identification of the concerned message. The code for the message type 'Invoices' is INV001.
Processing outgoing EDI Sub-System	.
ERP LN	The internal message code ecedi001.code 'INV001' of the ERP LN table ecedi001 'Supported EDI messages' is mapped to this position.
Processing Incoming EDI Sub-System	This field will be filled with the constant value 'INV001'.
ERP LN	The message code in the table ecedi001 'Supported EDI Messages' determines which internal message in ERP LN is connected to this Invoice. In the ERP LN table ecedi005 'EDI Messages' is determined for every message which session (DLL) is used in ERP LN to process the invoice. The message code is mapped to the ERP LN table field ecedi702.mess.

Position	10	Field Format	an..35	Field Status	M
Field Name		**Order Type**			

Description	This field contains a code for the concerned order type.
Processing outgoing EDI Sub-System	
ERP LN	In the ERP LN table ecedi011 there must be an entry for this order type in connection with the respective message and organization. The
	ERP LN table field ecedi011.koor is mapped to this position. This field is filled with the EDIFACT order types. For example "220" for normal invoices. The in-house order type is converted in ecedi433.
Processing Incoming EDI Sub-System	
ERP LN	Mapping to ERP LN table field ecedi702.koor. In the ERP LN table ecedi200 there must be an entry for this order type in connection with the respective message and organization.

Position	11	Field Format	an1	Field Status	C
Field Name		**Identifier of Test**			

Description	This field contains the code that will identify incoming messages for this organization as test messages. A test message is checked, but not copied to the database.
Processing outgoing EDI Sub-System	
ERP LN	The position will be filled with the ERP LN table field ecedi003.test
Processing Incoming EDI Sub-System	Transmission of the value from the transmission file.
ERP LN	Mapping to ERP LN table field ecedi702.test.

Position	12	Field Format	n..8 / n..14	Field Status	M
Field Name		**Date / Time of Transmission**			

Description	This field contains on the outgoing side the current date, on which the invoice message was created. On the incoming side, this field contains the arrival date / time of the invoice at the EDI Sub-System (format: YYYYMMDDHHMMSS).
Processing outgoing EDI Sub-System	
ERP LN	Mapping of the current date to the position.
Processing Incoming EDI Sub-System	Entry of the arrival date / time of the message at the EDI Sub-System.
ERP LN	Mapping to ERP LN table field ecedi702.send

Position	13	Field Format	n..6	Field Status	M

Field Name	**Time of Transmission**

Description	This field contains on the outgoing side the current time, on which the invoice message was created.
Processing outgoing EDI Sub-System	
ERP LN	Mapping of the current date / time to the position.
Processing Incoming EDI Sub-System	
ERP LN	N. A.

Position	14	Field Format	an7	Field Status	M

Field Name	**Data Record end sign**

Description	This field identifies the end of data record in the message block. It contains the constant value 'SA1_END'.
Processing outgoing EDI Sub-System	
ERP LN	This field will be filled with the constant value 'SA1_END'.
Processing Incoming EDI Sub-System	This field will be filled with the constant value 'SA1_END'.
ERP LN	None

SA2 Invoice Header

Status: Mandatory
